Forecast for Monday 08 Apr 2024

Weather: Cloudy with outbreaks of rain through the morning. Some drier, brighter spells possible into the early afternoon but further persistent and locally heavy rain returning through the later afternoon and into the evening. Remaining breezy but winds lighter than the weekend.

Chance of cloud-free hill tops above 800m: 30% to start and end the day, but 80% by late morning and for much of the afternoon.

Low Cloud and visibility: Widespread cloud above 400-500m at first, this lifting and breaking to give patchy amounts above around 700-800m into the late morning and early afternoon. Cloud thickening and lowering once again by the evening however, with bases increasingly falling to 300-400m in more persistent rain. Visibility mostly good, but poor in heavier rain and very poor in any low cloud at height.

Meteorologist's View

Large uncertainty about the persistence of any drier, brighter spells into the early afternoon. Best chance of these always in the east of the range. Keep an eye on the latest forecast.

Forecast for Tuesday 09 Apr 2024

Weather: Persistent early rain, wintry over summits, and very strong north-westerly winds both gradually easing through the day to give a drier and calmer evening.

Maximum wind: NW'ly 30-35mph gusting 50-55mph, steadily easing through the afternoon.

Chance of cloud-free hill tops above 800m: 10%, gradually improving to 80% through the day.

Low Cloud and visibility: Widespread cloud with bases falling to 300-400m in more persistent rain during the morning, lifting and breaking above summits through the afternoon. Visibility initially poor in heavier rain and very poor in any low cloud at height but improving through the day.

Temperature: **Valleys:** Plus 9C becoming plus 12C during the afternoon.
At 800m: Plus 1C.
Freezing level: 1000m initially, rising above all summits into the afternoon.
